Introduction

The Proposed Development is a renewable energy development comprised of up to eight wind turbines, a Battery Energy Storage System (BESS) and associated infrastructure adjacent to Sullom Voe Oil Terminal (SVT) and the Shetland Gas Plant in Shetland, Scotland. The Proposed Development is described in **Chapter 2: Proposed Development (EIAR Volume 2)**. The Application Boundary is presented on **Figure 1: The Search Area**.

As part of the planning process, Alba Ecology Ltd. was commissioned to conduct a natural heritage desk study. This desk study was undertaken in 2022/2023 to inform the design and application. **Figure 1: The Search Area** gives the Search Area, and the Application Boundary that was correct at the time the desk study was undertaken, 2022. **Figure 1: The Search Area** also has the final Application Boundary shown, but all other Figures in this document refer to the earlier 2022 Application Boundary.

The Desk Study aimed to identify biological records within approximately 2 km radius of the 2022 Application Boundary and to identify statutory conservation designated sites within a 10 km radius of the 2022 Application Boundary.

The centre of the 2022 Application Boundary is situated at approximately OS grid reference HU 42 76. **Figure 1: The Search Area** provides a map of the 2022 Application Boundary plus a 2 km buffer hereafter named the Search Area.

Figure 1: The Search Area.

The 2022 Application Boundary is characterised by blanket bog habitat. Details of the habitats within the 2022 Application Boundary can be found in the Neshion Energy Park Habitat Survey Report completed in 2023 by Alba Ecology.

A desk study of biological records was conducted in 2022-2023. Shetland Biological Records Centre (SBRC) was contacted, and data was obtained from the [NatureScot SiteLink](#) website and the [National Biodiversity Network \(NBN\) Atlas](#).

This desk study aims to identify records of species and habitats with conservation importance within the Search Area and statutory designated sites within 10 km of the Application Boundary.

Study methods

The data searches for this desk study follows Chartered Institute of Ecology and Environmental Management (CIEEM) best practice guidelines (e.g. [CIEEM, 2020](#); [CIEEM, 2017](#)). The background data aims to provide the following information:

- Designated site information;
- Existing records of protected/priority/notable species for the Search Area;
- Existing records of protected/priority/notable species for the surrounding area;
- Habitat information where available; and
- Soil and geological information for the Search Area.

Designated site information

Sites with statutory conservation designations located within a 10km of the 2022 Application Boundary were identified using the [NatureScot SiteLink](#) website (accessed February 2023). These included Sites of Special Scientific Interest (SSSI), Special Areas of Conservation (SAC), Special Protection Areas (SPA) and Ramsar sites. In addition, Local Nature Conservation Sites (LNCS) were also considered within the Search Area using details from Shetland Island Council (SIC, 2015).

Existing species records for the Search Area

SBRC

Species records were requested from the local biological records centre, as per best practice guidelines (CIEEM, 2020). SBRC was contacted in February 2023 to search for all biological records within the Search Area. Provision of the data by the SBRC recorders is neutral and should not be regarded, either explicitly or implicitly, as approving or opposing any project informed by the data.

NBN Atlas

All biological records within the Search Area were searched for on the NBN Atlas paying due regard to the restrictions on the NBN Atlas as per CIEEM guidance (2020).

All records for the Search Area were downloaded on the NBN Atlas website in February 2023. As per NBN Atlas guidance for commercial use, only the records which have an Open Data licence (coded CCO, CC-BY and OGL) have been considered and presented here. These data “*can be used for any purpose*” (NBN Atlas, 2023). Those data with a non-commercial licence (CC-BY-NC) were not included and were not inspected or considered. This is accordance with the NBN Atlas terms and conditions for commercial use (NBN Atlas, 2023).

It should be noted that the Data Provider, Original Recorder [where identified], and the NBN Trust bear no responsibility for any further analysis or interpretation of that material, data and/or information.

Provision of the data by the NBN recorders is neutral and should not be regarded, either explicitly or implicitly, as approving or opposing any project informed by the data.

As with all desk studies, the data collected are only as good as the data supplied to the recording schemes. The recording schemes and recorders provide disclaimers in relation to the quality and quantity of the data they provide, and these should be considered when examining the outputs of this desk study. No attempt has been made to verify these records. Common (vernacular) names are used where they have been provided by the recorder.

Scottish Biodiversity List

The Scottish Biodiversity List (SBL) is a list of animals, plants and habitats that Scottish Ministers consider to be of principal importance for biodiversity conservation in Scotland, under the Nature Conservation (Scotland) Act 2004. Therefore, all species records, for all sources, were compared against the Scottish Biodiversity List (SBL).

Existing habitat records for the Search Area and surrounding area

Relevant sources, such as the Ancient Woodland Inventory (AWI) and NatureScot’s open data for habitats (e.g. National Vegetation Classification (NVC) shapefiles) were examined to consider habitats that could be present within the Search Area.

Soil and Geology for the Site

Soil and geological information can provide insight into the vegetation expected on a site (Botanæco, 2021). Therefore, the British Geological Society’s (BGS) [hydrogeological](#) and [geological mapping](#) and the Scotland’s Soils (2016) [Carbon and Peatlands Map](#) have been consulted.

Results

Designated site information

A total of 11 statutory designated sites with biological features, within a 10 km radius of the 2022 Application Boundary, have been identified (**Table 1; Figure 2: Statutory designated sites within 10km of the 2022 Application Boundary**). These included two SPAs, three SACs, five SSSIs and a single Ramsar site. There was overlap between these designated sites (e.g. parts of Ronas Hill are a SPA, SAC, SSSI and Ramsar Site) and Yell Sound Coast included multiple sections of coastland. The closest designated sites to the Application Boundary are Yell Sound Coast SAC and SSSI and Sullom Voe SAC. A section of Yell Sound Coast is adjacent and slightly within the Application Boundary at the north end (**Figure 2**). It is designated for harbour seals and otters (**Table 1**). Sullom Voe SAC is designated for marine habitats and is adjacent to the Application Boundary on the northern end (**Table 1; Figure 2**).

Table 1: Statutory designated sites within 10km of the 2022 Application Boundary.

Local Nature Conservation Sites (LNCS)

There is a single LNCS within the Search Area, Bordigarth LNCS, which is primarily designated for breeding Schedule 1 bird species (SIC, 2015). The boundary of the LNCS, according to the Shetland Local Development Plan Supplementary Guidance (SIC, 2015) is in the south of the Search Area, but the boundary supplied by SBRC is larger and extends over much of the 2022 Application Boundary (**Figure 3: LNCS within the Search Area: note apparent discrepancy in boundary**). SBRC also stated active blanket bog as a feature of Bordigarth LNCS.

According to Shetland Local Development Plan Supplementary Guidance (SIC, 2015) *“The purpose of LNCS is to highlight sites with important natural heritage to developers and the Council. In identifying LNCS the Council does not seek to prohibit development; they provide more information to ensure that development takes into account the important and sensitive features of these sites. However, there may be occasions where development would be considered inappropriate and would not be permitted.”*

A published explanation for the apparent discrepancy between the description and boundary of the Bordigarth LNCS provided by SIC and NatureScot and that provided by SBRC could not be found, although SBRC state *“the original boundaries were provisional, and when we undertook a review of them for the council a few years ago, some of them were increased or reduced to reflect the key site interests”* (SBRC, pers comm.). It is recommended that clarification on this is sought from the planning authority, SIC in this instance (and potentially a planning lawyer).

SBRG data

The SBRG search (conducted on 17/02/2023) for all biological records for the Search Area provided a total of 2,550 records of 421 species. The full list of species is provided in **Annex A: Desk Study Data**.

Several species recorded were noted as scarce or rare in Shetland. These are presented in **Table 2**. It should be noted that some of these species are non-native in Shetland such as hedgehog and mountain hare.

NBN Atlas data

The NBN Atlas provided a total of 6,345 occurrences of 1,362 species from a variety of taxa (NBN Atlas occurrence download, 2023). Using only the data with an Open Data licence (coded CCO, CC-BY and OGL) the total number of occurrences was reduced to 3,586 with a total of 1,041 species. **Table 3** provides a summary of data by taxonomic groups. Only the data with an Open Data licence were considered in this report.

Existing habitat records for the Search Area

There were no records of ancient woodland within the Search Area. The open access NatureScot shapefiles for the National Vegetation Classification (NVC) did not hold any records within the Search Area. The open access NatureScot shapefiles for the Phase 1 Habitats included a very small section of the Search Area at the 2 km boundary. The habitats recorded were acid grassland and dry heath.

Sullom Voe SAC is adjacent to the 2022 Application Boundary as is designated for marine habitats. These are described in the Conservation Management Advice as:

“Sullom Voe protects a very diverse assemblage of marine habitats and many of the associated species-rich communities are poorly represented elsewhere in Europe. The complex voe system has a highly irregular coastline and contains reefs including horse mussels beds that provide habitats for other marine species such as brittle stars and sea squirts. The Sullom Voe SAC gives protection to an extensive and diverse system of saline lagoons, supporting a range of diverse communities. Muddy sediments present at a variety of depths in Sullom Voe support slightly different yet abundant communities, consisting predominantly of polychaetes, bivalves and amphipods” (NatureScot, 2021).

The Yell Sound Coast SSSI Citation describes the habitat within the designated as:

“Yell Sound Coast SSSI consists of low rocky coastlines backed by areas of peaty moorland with numerous sources of fresh water. This habitat provides suitable conditions for otters and sustains a nationally and internationally important breeding population. It is estimated that the site supports at least a fifth of Shetland’s population and 2.5 % of the British population” (NatureScot, no date).

Soil and Geology for the Search Area

The predicted Carbon and Peatland Map (2016) for the Search Area is shown in **Figure 4: Extract of the predicted Carbon and Peatland Map for the Search Area (Scotland’s Soil, 2016)**. It predicts that much of the Search Area is Class 1 peatlands, with other areas mostly predicted to be Class 4 or Class 5. Class 1 peatland is defined as *“nationally important carbon-rich soils, deep peat and priority peatland habitat and areas likely to be of high conservation*

Table 5: Summary descriptions of the soils, bedrock, and hydrogeology for the Search Area (BGS, 2023a; BGS, 2023b; Scotland's Soils, 2016).

Source	Details
Carbon and Peatland map	Predicted mixture of: - Class 1 - Nationally important carbon-rich soils, deep peat and priority peatland habitat. Areas likely to be of high conservation value. - Class 3 - Dominant vegetation cover is not priority peatland habitat but is associated with wet and acidic type. Occasional peatland habitats can be found. Most soils are carbon-rich soils, with some areas of deep peat. - Class 4 - Area unlikely to be associated with peatland habitats or wet and acidic type. Area unlikely to include carbon-rich soils. - Class 5 - Soil information takes precedence over vegetation data. No peatland habitat recorded. May also include areas of bare soil. Soils are carbon-rich and deep peat. - Class 0 - Mineral soil - Peatland habitats are not typically found on such soils. - Class -2 - Non-soil (e.g. loch, built up area, rock and scree).
BGS – superficial deposits	The majority of the superficial deposits in the Search Area were described as: - Peat. Sedimentary superficial deposit formed between 2.588 million years ago and the present during the Quaternary period. - Glacial Deposits - diamicton. Sedimentary superficial deposit formed between 2.588 million and 11.8 thousand years ago during the Quaternary period. - Marine Beach Deposits - gravel, sand and silt. Sedimentary superficial deposit formed between 2.588 million years ago and the present during the Quaternary period.
BGS – bedrock	The bedrock found in the Search Area are described as: North and west of the Search Area: - Yell Sound Psammite Formation - psammite and pelite. Metamorphic bedrock formed between 1000 and 541 million years ago between the Tonian and Ediacaran periods. West of Search Area: - Yell Sound Psammite Formation - psammite, gneissose. Metamorphic bedrock formed between 1000 and 541 million years ago between the Tonian and Ediacaran periods. South of Search Area: - Graven Complex - granodiorite. Igneous bedrock formed between 419.2 and 393.3 million years ago during the Devonian period.
BGS - hydrogeological maps	Low productivity aquifer with small amounts of groundwater in near surface weathered zone and secondary fractures.

Discussion

This desk study has identified several potentially important ecological sensitivities within the Search Area, as far as existing and freely available data allows. Desk-based studies of this nature have limitations, such as the reliability of third-party records, the coverage of reported studies and the age of data (former occurrence does not necessarily equate present occurrence).

A total of 11 statutory designated sites with biological features were recorded. The closest designated sites to the 2022 Application Boundary are Yell Sound Coast SAC and SSSI and Sullom Voe SAC. Additionally, Bordigarth LNCS is located in the 2022 Application Boundary, although the extent of this site is unclear and further expert advice is recommended.

There was a relatively high number of records for the Search Area for both the NBN data search and the SBRG data.

The SBRG search recorded some species as scarce or rare in Shetland. It should be noted that some of these species are very common in Mainland Scotland, such as rosebay willowherb. A small number of the species records from the SBRG search are on the SBL although some of these species are non-native in Shetland such as hedgehog and mountain hare. The former having caused ecological problems elsewhere when they have been introduced e.g. Western Isles.

All terrestrial mammal species in Shetland are non-native having been introduced by humans over time (Johnston, 1999). Neither NatureScot nor CIEEM provide guidance on determining the value of non-native species (with the exception of otter, which is a European Protected Species), so professional judgement and general guidance from the Invasive Non-native Species Framework Strategy for Great Britain has been used (DEFRA *et al.*, 2015). This suggests that non-native species should not be considered as valuable or important ecological receptors. This approach was also used and accepted at the Viking Wind Farm, Beaw Field Wind Farm, Mossy Hill Wind Farm and the Shetland (SaxaVord) Space Centre planning determinations.

The data from the NBN data search had particularly numerous records for some taxonomic groups e.g. there was 195 species of Annelida (worms), 150 species of fungi and many aquatic and marine invertebrates recorded in the Search Area. This indicates a good base level of knowledge for these groups. However, there was a relative paucity of biological records available for other taxonomic groups, such as some invertebrate groups e.g. spiders, indicating either that there was a low level of biodiversity within the Search Area and/or a low level of biological recording for some taxonomic groups. It is worth noting that the historic data supplied by data providers is just that, historic.

Otter is a notable species within the Search Area and is listed as a European Protected Species and features in adjacent designated sites. The Yell Sound Coast SSSI Citation notes that this

designated site supports at least a fifth of Shetland's otter population and 2.5% of the British otter population. The Yell Sound Coast SAC management statement states:

"The otter Lutra lutra population in Shetland is one of the most intensively-studied in Europe. Not only are the Shetland animals morphologically distinct from their mainland counterparts, they are also believed to be genetically distinct. In addition, specialists consider that the populations are possibly the densest in Europe. Therefore, the Shetland population is in many ways unique, and is considered of special importance in a UK context. Within Shetland, the Yell Sound area has the highest density of otter. Indeed the site is believed to support more than 2% of the entire GB otter population. The site consists of a complex of islands and coastline, selected to include the areas of highest otter density. The areas are characterised by low-lying peaty coastlines with large numbers of otter holts and easy access to fresh water. The adjacent marine areas have extensive algal beds which are used for foraging" (NatureScot, 2021).

There were a limited number of publicly accessible records of the habitats in and around the Search Area, with most information relating to the marine environment.

It is important to understand that a lack of information for a species (or indeed Class/Order) does not necessarily mean absence, and previous historical occurrence does not necessarily mean current presence.

Annex A: Desk Study Data – Species Records SBRG Data

Scientific name	Common name	Status
<i>Pellia epiphylla</i>	Overleaf Pellia	
<i>Pellia neesiana</i>	Nees' Pellia	
<i>Aneura pinguis</i>	Greasewort	
<i>Riccardia chamedryfolia</i>	Jagged Germanderwort	
<i>Riccardia latifrons</i>	Bog Germanderwort	
<i>Riccardia palmata</i>	Palmate Germanderwort	
<i>Frullania tamarisci</i>	Tamarisk Scalewort	
<i>Kurzia sylvatica</i>	Wood Fingerwort	
<i>Lepidozia cupressina</i>	Rock Fingerwort	Scarce (Shetland)
<i>Lophocolea bidentata</i>	Bifid Crestwort	
<i>Chiloscyphus polyanthus</i> var. <i>pallescens</i>	St Winifrid's Other Moss	
<i>Chiloscyphus polyanthos</i> var. <i>polyanthos</i>	Chiloscyphus polyanthos var. polyanthos	
<i>Plagiochila porelloides</i>	Lesser Featherwort	
<i>Cephalozia bicuspidata</i>	Two-horned Pincerwort	
<i>Cephalozia leucantha</i>	Pale Pincerwort	
<i>Nowellia curvifolia</i>	Wood-rust	Scarce (Shetland)
<i>Odontoschisma sphagni</i>	Bog-moss Flapwort	
<i>Gymnocolea inflata</i>	Inflated Notchwort	
<i>Barbilophozia floerkei</i>	Common Pawwort	
<i>Lophozia incisa</i>	Jagged Notchwort	
<i>Lophozia ventricosa</i>	Tumid Notchwort	
<i>Diplophyllum albicans</i>	White Earwort	
<i>Scapania gracilis</i>	Western Earwort	
<i>Scapania undulata</i>	Water Earwort	
<i>Mylia anomala</i>	Anomalous Flapwort	
<i>Mylia taylori</i>	Taylor's Flapwort	
<i>Calypogeia muelleriana</i>	Mueller's Pouchwort	
<i>Jungermannia gracillima</i>	Crenulated Flapwort	
<i>Nardia scalaris</i>	Ladder Flapwort	
<i>Marsupella emarginata</i> var. <i>emarginata</i>	Marsupella emarginata var. emarginata	
<i>Triglochin maritimum</i>	Sea Arrowgrass	
<i>Triglochin palustre</i>	Marsh Arrowgrass	
<i>Ruppia cirrhosa</i>	Spiral Tasselweed	
<i>Potamogeton perfoliatus</i>	Perfoliate Pondweed	
<i>Potamogeton polygonifolius</i>	Bog Pondweed	
<i>Armeria maritima</i> subsp. <i>maritima</i>	Thrift	
<i>Rumex acetosella</i>	Sheep's Sorrel	
<i>Rumex crispus</i>	Curled Dock	
<i>Drosera rotundifolia</i>	Round-leaved Sundew	
<i>Stellaria media</i>	Common Chickweed	
<i>Cerastium fontanum</i>	Common Mouse-ear	
<i>Sagina maritima</i>	Sea Pearlwort	
<i>Sagina procumbens</i>	Procumbent Pearlwort	
<i>Spergularia marina</i>	Lesser Sea-spurrey	Scarce (Shetland)
<i>Silene dioica</i>	Red Campion	
<i>Lychnis flos-cuculi</i>	Ragged-Robin	
<i>Atriplex prostrata</i> agg.	Atriplex prostrata agg.	Rare (Shetland)
<i>Montia fontana</i>	Blinks	
<i>Glaux maritima</i>	Sea-milkwort	
<i>Empetrum nigrum</i>	Crowberry agg.	
<i>Calluna vulgaris</i>	Heather	
<i>Erica tetralix</i>	Cross-leaved Heath	
<i>Plantago coronopus</i>	Buck's-horn Plantain	

<i>Plantago maritima</i>	Sea Plantain	
<i>Veronica beccabunga</i>	Brooklime	Scarce (Shetland)
<i>Callitriche hamulata</i>	Intermediate Water-Starwort	
<i>Potentilla erecta</i> subsp. <i>erecta</i>	Tormentil	
<i>Sparganium angustifolium</i>	Floating Bur-reed	
<i>Juncus bufonius</i> agg.	Toad Rush agg.	
<i>Juncus articulatus</i>	Jointed Rush	
<i>Juncus bulbosus</i>	Bulbous Rush	
<i>Juncus effusus</i>	Soft-rush	
<i>Juncus gerardii</i>	Saltmarsh Rush	
<i>Juncus squarrosus</i>	Heath Rush	
<i>Eriophorum angustifolium</i>	Common Cottongrass	
<i>Eriophorum vaginatum</i>	Hare's-tail Cottongrass	
<i>Trichophorum cespitosum</i>	Deergrass	
<i>Eleocharis palustris</i>	Common Spike-rush	
<i>Eleocharis quinqueflora</i>	Few-flowered Spike-rush	
<i>Eleocharis uniglumis</i>	Slender Spike-rush	Scarce (Shetland)
<i>Carex binervis</i>	Green-ribbed Sedge	
<i>Carex curta</i>	White Sedge	Scarce (Shetland)
<i>Festuca rubra</i> agg.	Red Fescue	
<i>Puccinellia distans</i> subsp. <i>borealis</i>	Northern Saltmarsh-grass	
<i>Puccinellia maritima</i>	Common Saltmarsh-grass	
<i>Poa humilis</i>	Spreading Meadow-grass	
<i>Deschampsia flexuosa</i>	Wavy Hair-grass	
<i>Holcus lanatus</i>	Yorkshire-fog	
<i>Aira praecox</i>	Early Hair-grass	
<i>Anthoxanthum odoratum</i>	Sweet Vernal-grass	
<i>Agrostis stolonifera</i>	Creeping Bent	
<i>Alopecurus geniculatus</i>	Marsh Foxtail	
<i>Cochlearia officinalis</i>	Common Scurvygrass	
<i>Cochlearia officinalis</i> subsp. <i>scotica</i>	Scottish Scurvygrass	
<i>Cardamine pratensis</i>	Cuckooflower	
<i>Sphagnum auriculatum</i>	Sphagnum denticulatum	
<i>Sphagnum capillifolium</i>	Red Bog-moss	
<i>Sphagnum cuspidatum</i>	Feathery Bog-moss	
<i>Sphagnum fimbriatum</i>	Fringed Bog-moss	
<i>Sphagnum magellanicum</i>	Magellanic Bog-moss	
<i>Sphagnum palustre</i>	Blunt-leaved Bog-moss	
<i>Sphagnum papillosum</i>	Papillose Bog-moss	
<i>Sphagnum recurvum</i>	Sphagnum recurvum	
<i>Sphagnum squarrosum</i>	Spiky Bog-moss	
<i>Sphagnum subnitens</i>	Lustrous Bog-moss	
<i>Sphagnum tenellum</i>	Soft Bog-moss	
<i>Atrichum undulatum</i>	Common Smoothcap	
<i>Pogonatum aloides</i>	Aloe Haircap	
<i>Polytrichum alpinum</i>	Alpine Haircap	
<i>Polytrichum commune</i>	Common Haircap	
<i>Polytrichum commune</i> var. <i>commune</i>	<i>Polytrichum commune</i> var. <i>commune</i>	
<i>Polytrichum juniperinum</i>	Juniper Haircap	
<i>Polytrichum piliferum</i>	Bristly Haircap	
<i>Polytrichum alpestre</i>	Strict Haircap	
<i>Funaria hygrometrica</i>	Common Cord-moss	
<i>Schistidium strictum</i>	Upright Brown Grimmia	Rare (Shetland)
<i>Grimmia pulvinata</i>	Grey-cushioned Grimmia	

<i>Racomitrium aciculare</i>	Yellow Fringe-moss	
<i>Racomitrium fasciculare</i>	Green Mountain Fringe-moss	
<i>Racomitrium lanuginosum</i>	Woolly Fringe-moss	
<i>Ceratodon purpureus</i>	Redshank	
<i>Dichodontium pellucidum</i>	Dichodontium pellucidum	
<i>Dicranella palustris</i>	Marsh Forklet-moss	
<i>Dicranum majus</i>	Greater Fork-moss	
<i>Dicranum scoparium</i>	Broom Fork-moss	
<i>Campylopus brevipilus</i>	Compact Swan-neck Moss	
<i>Campylopus paradoxus</i>	Rusty Swan-neck Moss	
<i>Campylopus introflexus</i>	Heath Star Moss	
<i>Barbula convoluta</i> var. <i>convoluta</i>	Lesser Bird's-claw Beard-moss	Rare (Shetland)
<i>Barbula fallax</i>	Fallacious Beard-moss	
<i>Barbula cylindrica</i>	Cylindric Beard-moss	
<i>Barbula rigidula</i>	Rigid Beard-moss	
<i>Tortula muralis</i>	Wall Screw-moss	
<i>Orthotrichum anomalum</i>	Anomalous Bristle-moss	
<i>Orthotrichum cupulatum</i>	Hooded Bristle-moss	
<i>Ulotia phyllantha</i>	Frizzled Pincushion	
<i>Bartramia ithyphylla</i>	Straight-leaved Apple-moss	
<i>Philonotis fontana</i>	Fountain Apple-moss	
<i>Bryum bicolor</i>	Bryum bicolor	
<i>Bryum capillare</i>	Capillary Thread-moss	
<i>Bryum pallens</i>	Pale Thread-moss	
<i>Pohlia nutans</i>	Nodding Thread-moss	
<i>Pohlia wahlenbergii</i>	Pale Glaucous Thread-moss	
<i>Mnium hornum</i>	Swan's-neck Thyme-moss	Scarce (Shetland)
<i>Rhizomnium punctatum</i>	Dotted Thyme-moss	
<i>Plagiomnium undulatum</i>	Hart's-tongue Thyme-moss	
<i>Pseudobryum cinclidioides</i>	River Thyme-moss	
<i>Aulacomnium palustre</i>	Bog Groove-moss	
<i>Fontinalis antipyretica</i>	Greater Water-moss	
<i>Campylium stellatum</i> var. <i>stellatum</i>	Campylium stellatum var. stellatum	
<i>Drepanocladus revolvens</i>	Rusty Hook-moss	
<i>Drepanocladus exannulatus</i>	Ringless Hook-moss	
<i>Calliergon stramineum</i>	Straw Spear-moss	
<i>Calliergon cordifolium</i>	Heart-leaved Spear-moss	
<i>Thuidium tamariscinum</i>	Common Tamarisk-moss	
<i>Eurhynchium praelongum</i>	Common Feather-moss	
<i>Brachythecium plumosum</i>	Rusty Feather-moss	
<i>Brachythecium rivulare</i>	River Feather-moss	
<i>Brachythecium rutabulum</i>	Rough-stalked Feather-moss	
<i>Pseudoscleropodium purum</i>	Neat Feather-moss	
<i>Homalothecium sericeum</i>	Silky Wall Feather-moss	
<i>Calliergon cuspidatum</i>	Pointed Spear-moss	
<i>Hypnum cupressiforme</i>	Hypnum cupressiforme	
<i>Hypnum jutlandicum</i>	Heath Plait-moss	
<i>Pleurozium schreberi</i>	Red-stemmed Feather-moss	
<i>Rhytidiadelphus loreus</i>	Little Shaggy-moss	
<i>Rhytidiadelphus squarrosus</i>	Springy Turf-moss	
<i>Hylocomium splendens</i>	Glittering Wood-moss	
<i>Plagiothecium undulatum</i>	Waved Silk-moss	
<i>Isothecium myosuroides</i> var. <i>brachythecioides</i>	Isothecium myosuroides var. brachythecioides	
<i>Ophioglossum azoricum</i>	Small Adder's-tongue	

<i>Equisetum arvense</i>	Field Horsetail	
<i>Equisetum fluviatile</i>	Water Horsetail	
<i>Blechnum spicant</i>	Hard-fern	
<i>Polypodium vulgare</i> agg.	Polypody	
<i>Diphasiastrum alpinum</i>	Alpine Clubmoss	Scarce (Shetland)
<i>Narthecium ossifragum</i>	Bog Asphodel	
<i>Dactylorhiza maculata</i>	Heath Spotted-orchid	
<i>Iris pseudacorus</i>	Yellow Iris	
<i>Scilla verna</i>	Spring Squill	
<i>Caltha palustris</i>	Marsh-marigold	
<i>Ranunculus acris</i>	Meadow Buttercup	
<i>Ranunculus flammula</i> subsp. <i>flammula</i>	Lesser Spearwort	
<i>Ranunculus repens</i>	Creeping Buttercup	
<i>Lotus corniculatus</i>	Common Bird's-foot-trefoil	
<i>Trifolium pratense</i>	Red Clover	
<i>Trifolium repens</i>	White Clover	
<i>Viola palustris</i> subsp. <i>palustris</i>	Marsh Violet	
<i>Chamerion angustifolium</i>	Rosebay Willowherb	Rare (Shetland)
<i>Galium aparine</i>	Cleavers	
<i>Galium palustre</i> subsp. <i>palustre</i>	Common Marsh-bedstraw	
<i>Galium saxatile</i>	Heath Bedstraw	
<i>Gentianella amarella</i> subsp. <i>septentrionalis</i>	Autumn Gentian	
<i>Jasione montana</i>	Sheep's-bit
